- Control from any device
- Pre-recorded messages
- Easy deployment
- Solar powered battery
- 20ft boom shaft
- Object recognition
- Up to 98ft of night vision
- Wide angle view

SUITABLE FOR

Globe Power Solar Sentry boom gate systems are ideal for access management where no power is available. These solar powered remote control boom gates allow for the system to be operated autonomously from any distance, perfect for remote deployment around the site, controlled and monitored from a central hub.

Our system has three cameras so that it can capture both entering and exiting traffic, as well as log registration plates. The system's registration plate recognition feature allows for white-listed number plates to gain entry, while the pass code and keyfobs can be provided locally for temporary access. Where these options aren't applicable, the intercom also allows for manual verification of unlisted vehicles.
